

Overview

The ceiling array microphone shall consist of eight highly directional pickup lobes to capture individual talkers and deliver discrete audio signals over a single network cable. It shall support 10 total channels (8 independent transmit channels, 1 automatic mixing transmit channel, and 1 echo reduction reference receive channel). The microphone shall provide built-in IntelliMix® digital signal processing to deliver steerable coverage™, echo reduction, automatic mixing, and equalization. Audio routing shall be controlled through a computer on the Dante™ network. Browser-based control software shall provide the ability to aim individual lobes based on participant seating, and control digital signal processing from any computer on the network. Pickup lobe width shall be selectable, with narrow, medium, and wide settings. Mounting options shall include ceiling tile, suspension mounting, and VESA mounting options.
